Recap

Our Magic Chip

- ▶ $V_{CC} \rightarrow 10$
- ▶ $GND \rightarrow 11$
- ▶ *PortB*, $PB7 \rightarrow 8 - 1 \leftarrow PB0$
- ▶ *PortD*, $PD7 \rightarrow 21 - 14 \leftarrow PD0$
- ▶ *PortC*, $PC7 \rightarrow 29 - 22 \leftarrow PC0$
- ▶ *PortA*, $PA7 \rightarrow 33 - 40 \leftarrow PA0$

Let Us C for Microcontrollers

```
#include <avr/io.h>

int main(void)
{
    //initialization
    while(1)
    {
        //Continuous Processing
    }
    return 0;
}
```

Digital I/O in ATmega16

- ▶ 4 8-bit digital IO ports, A, B, C, D
- ▶ Each port has 8 data pins
- ▶ Every **pin** is bidirectional and can be configured as-
 - ▶ input (receiving data in mcu)
 - ▶ output (sending data from mcu)

Digital I/O in ATmega16 Contd.

Configuring Pins for Input & Output

- ▶ Relevant 8 bit Registers
 - ▶ Data Direction Register (**DDRx**), where, $x = A, B, C, D$
- ▶ pin configuration,
 - ▶ input $\rightarrow 0$
 - ▶ output $\rightarrow 1$
- ▶ C Code Example,
 - ▶ `DDRA = 0b10101010;`

		o	i	o	i	o	i	o	i
DDRA		1	0	1	0	1	0	1	0
Pin	33	.					.	40	

Digital I/O in ATmega16 Contd.

Reading Input Data from Port

- ▶ Relevant 8 bit Registers
 - ▶ Input Pins Address (**PIN x**), where, $x = A, B, C, D$
- ▶ **What if some pins are configured as output?**
 - ▶ we get garbage value
 - ▶ so bit mask them before checking
- ▶ C Code Example,
 - ▶ `unsigned char ch;`
`ch = PINA;`

Digital I/O in ATmega16 Contd.

Writing Output Data to Port

- ▶ Relevant 8 bit Registers
 - ▶ Data Register (**PORT x**), where, $x = A, B, C, D$
- ▶ What if some pins are configured as input?
- ▶ C Code Example,
 - ▶ `PORTA = 0b01010101;`

Our Very Simple Counter

Requirements

1. *PA0* connected with the push button
 - ▶ takes pulse input
2. *PORTB* connected with 8 LEDs
 - ▶ displays the number of given pulses

Our Very Simple Counter

The C Program

```
5 #include <avr/io.h>
6
7 int main(void)
8 {
9     unsigned char ch      = 0;
10    unsigned char counter = 0;
11
12    DDRA = 0b11111110;
13    DDRB = 0b11111111;
14
15    PORTB = counter;
16    while(1)
17    {
18        ch = PINA;
19        ch = ch & 1;
20
21        if(ch == 0)
22        {
23            //do nothing
24        }
25        else
26        {
27            counter += 1;
28            PORTB   = counter;
29        }
30    }
31    return 0;
32 }
```

Our Very Simple Counter

The C Program

```
5 #include <avr/io.h>
6
7 int main(void)
8 {
9     unsigned char ch      = 0;
10    unsigned char counter = 0;
11
12    DDRA = 0b11111110;
13    DDRB = 0b11111111;
14
15    PORTB = counter;
16    while(1)
17    {
18        ch = PINA;
19        ch = ch & 1;
20
21        if(ch == 0)
22        {
23            //do nothing
24        }
25        else
26        {
27            counter += 1;
28            PORTB    = counter;
29        }
30    }
31    return 0;
32 }
```

Can you report any problem?

Our Very Simple Counter

The C Program

```
5 #include <avr/io.h>
6
7 int main(void)
8 {
9     unsigned char ch      = 0;
10    unsigned char counter = 0;
11
12    DDRA = 0b11111110;
13    DDRB = 0b11111111;
14
15    PORTB = counter;
16    while(1)
17    {
18        ch = PINA;
19        ch = ch & 1;
20
21        if(ch == 0)
22        {
23            //do nothing
24        }
25        else
26        {
27            counter += 1;
28            PORTB    = counter;
29        }
30    }
31    return 0;
32 }
```

We have to add delay

Our Very Simple Counter

The *Delayed* C Program

Version 1

```
4
5#include <avr/io.h>
6
7void delay(void){
8    int i,j;
9    for(i=0;i<1000;i++){
10       for(j=0;j<1000;j++){
11          asm volatile("nop");
12       }
13    }
14}
15
16int main(void)
17{
18    unsigned char ch    = 0;
19    unsigned char counter = 0;
20
21    DDRA  = 0b11111110;
22    DDRB  = 0b11111111;
23
24    PORTB = counter;
25    while(1)
26    {
27        ch = PINA;
28        ch = ch & 1;
29
30        if(ch == 0)
31        {
32            //do nothing
33        }
34        else
35        {
36            counter += 1;
37            PORTB  = counter;
38            delay();
39        }
40    }
41    return 0;
42}
```

Our Very Simple Counter

The *Delayed* C Program

Version 1

```
4
5#include <avr/io.h>
6
7void delay(void){
8    int i,j;
9    for(i=0;i<1000;i++){
10       for(j=0;j<1000;j++){
11          asm volatile("nop");
12       }
13    }
14}
15
16int main(void)
17{
18    unsigned char ch    = 0;
19    unsigned char counter = 0;
20
21    DDRA  = 0b11111110;
22    DDRB  = 0b11111111;
23
24    PORTB = counter;
25    while(1)
26    {
27        ch = PINA;
28        ch = ch & 1;
29
30        if(ch == 0)
31        {
32            //do nothing
33        }
34        else
35        {
36            counter += 1;
37            PORTB   = counter;
38            delay();
39        }
40    }
41    return 0;
42}
```

Version 2

```
4
5#include <avr/io.h>
6#include <util/delay.h>
7
8int main(void)
9{
10    unsigned char ch    = 0;
11    unsigned char counter = 0;
12
13    DDRA  = 0b11111110;
14    DDRB  = 0b11111111;
15
16    PORTB = counter;
17    while(1)
18    {
19        ch = PINA;
20        ch = ch & 1;
21
22        if(ch == 0)
23        {
24            //do nothing
25        }
26        else
27        {
28            counter += 1;
29            PORTB   = counter;
30            _delay_ms(1000);
31        }
32    }
33    return 0;
34}
```

Practice Problem

Monitor bit 7 of *PORTB*, if it is 1, configure *PB4* as input; else change it to output.

Practice Problem

Monitor bit 7 of *PORTB*, if it is 1, configure *PB4* as input; else change it to output.

```
1
2
3
4
5 #include <avr/io.h>
6
7 int main(void)
8 {
9     unsigned char ch = 0;
10
11     DDRB = DDRB & 0b01111111;
12
13     while(1)
14     {
15         ch = PINB;
16         ch = ch & 0b10000000;
17
18         if(ch == 0b10000000)
19         {
20             DDRB = DDRB & 0b11101111;
21         }
22         else
23         {
24             DDRB = DDRB | 0b00010000;
25         }
26     }
27     return 0;
28 }
```
